

COMPACT BALL VALVE TYPE 27

(Manual Type)

Features

- With a small number of components and light weight, compact design, suitable for installation in a narrow space and ideal for facility piping in plants.
- The spherical valve element allows for a straight flow path and extremely small fluid resistance. (Excellent water characteristics)
- No risk of difficult handle operation due to thermal expansion or contraction.
- Using PTFE, the seat is highly resistant to corrosion, chemicals and abrasion.

Basic specifications

- Valve Type : Compact Ball Valve Type 27
- Size : 15 mm — 50 mm (3/8 inch — 2 inch)
- Body Material : U-PVC (Conforming to ASTM D1784 Cell Classification 12454A)
C-PVC (Conforming to ASTM D1784 Cell Classification 23567-A)
- Seal Material / Seat : PTFE
/ O-ring : EPDM, FKM etc
- Connection / Socket : JIS, DIN, ASTM D2466 SCH40
Threaded : Rc, Rp, NPT

Body Material	FLUID TEMPERATURE °C {°F}	Maximum working pressure (Normal temperature) MPa {psi}	Connection method	
			Socket	Threaded
U-PVC	0 ~ 50 { 30~122 }	1.0 { 150 }	○	○
C-PVC	0 ~ 90 { 30~195 }	1.0 { 150 }	○	○

Note::

- (1) The ball-type valves have dead spaces for structural reasons. Note that volatile liquids, such as hydrogen peroxide (H₂O₂) and sodium hypochlorite (NaClO), vaporize in those dead spaces, which may cause abnormal pressure increase in the valve. (When the internal pressure abnormally increases due to vaporization, the gas will be compressive fluid. If the valve breaks in this state, it will be very dangerous, causing explosion and scattering of fragments.)
- (2) The maximum working pressure is the value including the water hammer pressure. Be careful that the maximum working pressure is not exceeded during use.

* Concerning the allowable pressure for each temperature and material, see the technical documents at the next page of this sheet.

Certificate / Approval / Directive

PED, NSF/ANSI61
